DRAFT 2

SUBJECT: TALENT Material and Assistance [REDACTED]

25X1

25X1

IMPROVEMENT OF [REDACTED] PI CAPABILITY

25X1

25X1

8. Recommendations for improving the present [REDACTED] capability could be restricted to dark room equipment such as electronic printer, improved enlargers, rectifying enlargers, and PI exploitation gear such as Bausch and Lomb stereographic viewer, stereomicroscopes, and such other equipment as the Williamson projector. Files of reference and PI source materials could be reviewed, and it is quite probable that additional material, such as PI keys and other basic studies, would be very helpful and could be supplied. Procedures could be discussed in the use of collateral and certain basic and not too sensitive organizational and procedural problems.

specification of which would be similar to our TALENT system. The essentials of security measures are as follows:

a. Personnel

- (1) A limited, designated number of personnel cleared in accordance with our security standards.
- (2) Individual, signed security agreement.
- (3) Filing of names of cleared personnel with us. Those designated and only those would be told that the previously received sanitized prints came from this source. The sanitized prints are subject to the same security as the "unsanitized" prints.

b. Physical

- (1) Logging or registering procedure.
- (2) Courier procedure.
- (3) Establishment of restricted area and vault for work.
- (4) Overnight storage in safe within vault in restricted area.
- (5) Twenty-four hour guard for cleared area.
- (6) Above facilities and procedures subject to our inspection.

9. Since the training involved is particularly relevant to new equipment, we recommend that training be conducted there when the equipment is installed  The report  indicated good photo intelligence capability but reflected a possible lack of photogrammetric training in depth. If additional photogrammetric training is indicated,
